

THE STATIC ELECTRICITY

Theory

The static electricity comes from the transfer of electrons between two or more atoms becoming electrically unbalanced.

How is it created?

The static electricity is created after contact between two materials (which at least one of them is an insulator).

The static electricity level depends on humidity, materials, as well as on the pressure, the time, and the surface of contact.

An electric voltage of several kV might be easily generated.

- ① Usually an object contains positive ions and negative ions. They are same in quantity and keep balance.
- ② When two objects come into contact, unstable electrons start moving (Charge Transfer).
In such a state, however, electrons just move, and two objects in touch as a whole are not charged.
- ③ Dragging these objects away makes the number of electrons unbalanced.
At this time, one object which receives electrons is negatively charged, while another object which loses them is positively charged.
- ④ Then, the electrons transfer, once the object, either negatively or positively charged, approaches to a grounded metal.

Triboelectric series

The Triboelectric Series chart shows the relative positive or negative charge of various materials.

Consequences

Three types of problems can result from static electricity:

- Apparition of electric arcs, which can damage the electronic circuits,
- Dust attraction, which can lead to unwanted defaults after parts painting or cause hygiene and cleanliness problems,
- And attraction or repulsion of other materials, which can cause, for instance, printing problems due to the repulsion of the ink or labeling problems due to the unwanted repulsion or attraction of the paper when being positioned.

How is it eliminated?

Different methods are used:

If possible and if it is a conductor, connect the part to the ground:

- The voltage of the part will be equal to 0V. However in certain cases, in order to avoid any sudden discharge, which could lead to electric arcs, it is necessary to use dissipative material with a controlled conductivity.

Otherwise use a ionizer:

- The ionizer will send positive and negative ions to be combined with the positive and negative charges on the targeted surface.
The ions are created thanks to the corona discharge principle.
The static electricity elimination is made without any contact.

BLOWER

FOR STATIC ELECTRICITY ELIMINATION

F6CL-E Ionizing Mini Fan with clip

Clip onto workbench or pillar
for pinpoint neutralization

F6ST-E Ionizing Mini Fan with stand

Compact fan can be installed
anywhere for pinpoint
neutralization

F12E-E Fan-type Ionizer

Maintains an ion balance of
 ± 5 V using capacitive-
coupled electrode needles

F120R-E Fan-type Ionizer

Butterfly Louver !
for wider and far reach static
erasing area

MANUAL APPLICATIONS IONIZERS

GUN TYPES AND ION PARTS CLEANER

FOR STATIC ELECTRICITY ELIMINATION AND DUST REMOVAL

G7R-E
Gun-type Ionizer

Our most popular ionizing air gun is compact, lightweight and user-friendly

BBZ-E
Gun-type Ionizer

Silent and high durability model ideal for air blowing in wide areas

IPC-A4 / A3
Ion Parts Cleaner

A4/A3 size is ideal for capturing dust with adhesive urethane gel at cell workbench

IPC20-E / IPC40-E
Ion Parts Cleaner

Work piece is detected with sensor, and dust eliminating air is sprayed and particles are attracted by a vacuum

AUTOMATIC APPLICATIONS IONIZERS

NOZZLE TYPES AND BARS

FOR STATIC ELECTRICITY ELIMINATION AND DUST REMOVAL

N-1 Super Slim Nozzle-Type Ionizer

Super Compact Slim Body.
A rotating nozzle enables to
ionize anywhere

N-2 Pinpoint Nozzle Ionizer

Featuring an LED indicator
that communicates
the device's operating status

C-bar Series

AC Pulse Ionizing Clean Bar (Length from 90 to 300 cm)

Clean & Compact.
Newly designed high-precision and
high-speed ionizer applying
a new technology

SH-bar Series

Compact AC Pulse Ionizing Bars (Length from 16 to 70 cm)

Slim & High-speed Neutralization.
Compact bar type ionizer with
separate power supply for easy installation

CONDUCTIVE RUBBER MAT

**FOR CONTROLLED STATIC
ELECTRICITY DISSIPATION**

Controlling electroconductivity between $10^6\Omega$ and $10^7\Omega$ without influencing the working environment. Ideal for workbenches requiring static electricity measures

**EPA Working Mat ·
Conductive Rubber Mat
LG-100/SG-100**

Visualizing invisible static electricity
Peak hold supports long-time
measurements

**Electrostatic
Field Meter
Eye-02**

ELECTROSTATIC FIELD METER

**ESSENTIAL ITEM FOR
STATIC ELECTRICITY MEASURES.
VISUALIZE THE STATIC CHARGE AND
DISCHARGE STATE**
